

Vol. 2 No. 1 (2024): Electronics Communications, and Computing Summit -Spring 2024

Table of Content

S.no	ARTICLE TITLE	AUTHORS	Page
1	Design and Simulation of Ultra-Low Power Embedded Systems for Energy-Constrained IoT Applications	Sumit Ramswami Punam	1 - 10
2	Advanced MEMS-Based Micro-Sensing Technologies for Precision Biomedical Applications	Neveen Geweely, Zhiyi Chen	11-17
3	High-Efficiency Power Amplifier Design for Next-Gen Electronics Applications and IoT Devices	Ashu Nayak	18-28
4	Next-Generation Semiconductor Materials for Next-Gen Electronics Applications and Flexible Systems	Xanth Mallett, Ranjan Kumar Dahal	29-37
5	Design and Analysis of Fault-Tolerant Architectures in Nanoelectronic Circuits	Namrata Mishra	38-46
6	AI-Enhanced Design Automation for Next-Gen Electronics Applications and VLSI Systems	Laith Ahmed Najam, Rebert H. Luedkea	47-56
7	Energy Harvesting Circuits for Next-Gen Electronics Applications and Wearable Electronics	Aakansha Soy	57-69
8	Design and Deployment of Smart Sensor Networks for Advanced Electronics and Industrial Automation	Belal Batiha	70-81
9	Next-Generation Semiconductor Materials for High-Performance Flexible Electronics: A Comprehensive Review	Mrunal Salwadkar	82-91
10	Design and Optimization of a High-Efficiency Power Amplifier for Low-Power IoT Devices in Sub-GHz Wireless Applications	Alaa Abdelwahed Hassan Abdelbary, Shahid Mukhtar	92-97
11	Design, Simulation, and Hardware Validation of Ultra-Low Power Embedded Architectures for IoT Edge Devices	Dr. Nidhi Mishra	98-106
12	Design of Fault-Tolerant Nanoelectronic Architectures for Low-Power Computing Applications	Len Gelman, Raveendra H Patil	107-114

13	Artificial Intelligence-Driven Design Automation Framework for Efficient VLSI System Development	Pushplata Patel	115-122
14	Design and Optimization of Energy Harvesting Circuits for Ultra-Low Power Wearable Electronics	Eleazu Ogbonnaya, Yip Mum Wai	123-130
15	Design and Deployment of Smart Sensor Networks for Real-Time Industrial Automation	Moti Ranjan Tandi	131-137
